

People -- Here are my notes from the UEC phone conference of 3 Oct 1994

attending: appel, crawford, franklin, haggerty, hemmick, hertzog

OMB Questionnaire : we agreed that we would split up the questions amongst ourselves, and provide draft answers to crawford by 5 PM PST 4 Oct. These are based on the replies from a subset of our spokesmen.

1,2 : appel
3 : franklin
4,5 : haggerty
6,7 : hemmick
8 : hertzog
9 : crawford
10 : franklin et al.

Note that No.10 will include additional material specifically from the hypernuclear community, and may include a not concerning RHIC if we can get something appropriate from Ludlam. Crawford will check with Pile to see if all information is included. Crawford will then put together a draft of the document and circulate it by wednesday AM, for final comments by 8 PM PDT Wednesday. It then goes to Kirk and finally to OMB on Thursday PM.

DNP meeting in Williamsburg, Va on 27 Oct 1994: We will have a 2 hour meeting in the evening to present the AGS and RHIC. I have asked Pile and Ludlam to make short presentations, and have discussed the idea of a short talk from each of Chasman(E866) and Braun-Munzinger(E877). I think we should also have a short presentatino from the proton program but I have not gotten any volunteer yet. Help.

HI beam schedule meeting of July 1994: We have heard rumblings that the meeting between AGS/BNL management and the spokesmen of the active heavy ion experiments did not meet with resounding approval. Recall that this meeting was called to make sure that the AGS understood when the experiments would be ready for beam, and the spokesmen understood when beam would be available. The intent is to make the system more efficient, matching beam availability with experiment readiness. It is suggested that we first contact each spokesman individually, then the AGS, and try to lay the groundwork before an open meeting. OK, we'll try.
